

REACTA WIRELESS

REACTA-DIM

DEXTRA REACTA-DIM SOLUTION

Where only power cabling is installed yet customers need to introduce wall switch control to enable luminaires to be turned on and off or dimmed up and down Reacta-Dim offers the ideal solution.

Reacta-Dim provides a wireless receiver in each luminaire which can be grouped with a wireless wall switch enabling the introduction of controls without any of the disruption or cost associated with rewiring an installation to introduce control cabling. The Reacta-Dim wall switch is battery powered further simplifying installation and ensuring it can be positioned in any suitable location without any concern for connecting mains power. Grouping of luminaires and wall switches is undertaken through a mobile phone app which is available in both Android and Apple variants.

Please note that Reacta-Air and Reacta-Wave are not interoperable systems, they must be used as stand alone systems.

Frequency 5.8GHz
